## **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this
 Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Den Hombergh et al. (US. 5038212).

Regarding claim 1, Van Den Hombergh et al. discloses a method of receiving teletext pages each having a page number, comprising the steps of:

- determining the page numbers of said transmitted teletext pages (fig. 6, col.7, lines 37-42);
- storing indications indicating the presence of the teletext pages in the transmission, characterized in that said memory (fig. 3, ref. 46, 48) includes two memory sections, the step of storing said indications comprising alternately storing said indications in one of said memory sections during a predetermined

mber: 09/771,873

period of time, and removing said indications in the respective memory section prior to said storing of the indications (fig. 6, col. 7, lines 30-61).

Regarding claim 2, Van Den Hombergh et al. discloses a method as claims in claim 1, wherein each memory section comprises a table having, for each possible page number, a location for storing the indication of presence of the respective page as a first value and the indication of absence of said page as a second value (fig. 4, col. 6, lines 10-48).

Regarding claim 3, Van Den Hombergh et al. discloses a method as claimed in claim 1, further comprising the step of counting the number of times a teletext page is received for which the indication of presence has already been stored, said predetermined period of time having lapsed when said number of time exceeds a given number (fig. 3, col. 6, lines 5-10; fig. 6, col. 7, lines 65-68; col. 8, lines 1-5).

Regarding claim 4, Van Den Hombergh et al. discloses a receiver teletext pages each having a page number (fig. 1, col. 4, lines 40-57), comprising:

- a control circuit for determining the page numbers of said transmitted teletext pages (fig. 6, col. 7, lines 37-42);
- a memory for storing indications indicating the presence of the teletext pages in the transmission, characterized in that said memory includes two memory sections, the step of storing said indications comprising alternately

Application/Control Number: 09/771,873

Art Unit: 2626

storing said indications in one of said memory sections during a predetermined period of time, and removing said indications in the respective memory section prior to said storing of the indications (fig. 6, col. 7, lines 30-61).

Regarding claim 5, Van Den Hombergh et al. discloses a receiver as claims in claim 4, wherein each memory section comprises a table having, for each possible page number, a location for storing the indication of presence of the respective page as a first value and the indication of absence of said page as a second value (fig. 4, col. 6, lines 10-48).

Regarding claim 6, Van Den Hombergh et al. discloses a receiver as claimed in claim 4, further comprising the step of counting the number of times a teletext page is received for which the indication of presence has already been stored, said predetermined period of time having lapsed when said number of time exceeds a given number (fig. 3, col. 6, lines 5-10; fig. 6, col. 7, lines 65-68; col. 8, lines 1-5).

## Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Van Gestel (WO 97/12485), Van Den Hombergh et al. (US. 5119200), and Santilli et al. (US. 5821982) are cited to show related art with respect to teletext page transmission.
